GHOST + EMAIL + CREATE

Locked prompt — 14 Sep 2026 — 18 accounts through a0018 — Ghost Create-first lock

Built by OpenCode (Muse Spark — muse-spark-1.2-contributor-free) live over USB on iPhone 7 iOS 15.8 palera1n rootless

OPENCODE ONLY — SMOOTH LOCKED

Ghost + Hide My Email + Create + Day 1 — follow exactly, no guessing

This PDF is the single source for smooth
Read in order: 1) Preflight 2) Ghost 3) Email 4) Create+Day1 5) Never 6) Dump-first 7) After .py edit. Do not read LIVE_CREATE_PROMPT unless doing Reddit Create. Do not reverse Ghost.dylib. Do not commit secrets/dumps/logs.

Device:	PC KaiTh Windows USB, iPhone 7 iOS 15.8 palera1n rootless serial a4e58990ded23b45ecf69f32a8aeddf5e1b654d4, keep awake unlocked no passcode, XXTouch Elite OpenAPI :46952 Remote ON, screen 750x1334, one Lua at a time
Proven:	18 slots r1-r13 + a0014-a0018. Day1: r1-r13 and a0014-a0017. a0018 Create done Day1 not marked. Ghost+HME a0019-a0025. Next Ghost a0026. a0014 remint ascetic.skyward_8t labeled a0014 (old r14 retired). Passwords in logs/accounts.txt never print.

1. Preflight (every run)

- Phone awake unlocked, no passcode. USB serial a4e58990ded23b45ecf69f32a8aeddf5e1b654d4. Desktop iTunes/AMDS up. XXTouch Elite open Remote Service on, keep one Lua.
- SSH 127.0.0.1:2222 -> device 22 as mobile (password via GUI field or gitignored secrets.json, never print). Check secrets.json keys only.
- .venv ready, :2222 SSH up (OpenSSH 9.7), :46952 XXTouch up, dump + PNG + tap + type + swipe working. Phone unlocked, SpringBoard or Ghost, not Passcode.

2. Ghost — Reddit container (locked 14 Sep 2026)

2a. Open

- close leftover Ghost first (Home, double-Home 280ms, flick 375,780->375,60). uiopen Ghost. If Crane (Edit+Applications y<120 / Make Default Container): Home first, then Ghost. Application List (317,1063) -> Reddit (240,438) -> Containers. Never heart tap. Never swipe Ghost Home.

2b. New Container

- Create FIRST. Do not scan the list. New Container 50pt above OCR (376,1199). Create not Confirm. type_text_block the full padded name (a0026). Char-by-char dropped zeros (a0019->a19). r1-r13 stay rN. New: a0014...a9999 then b10000. a0014-a0025 already exist. Next new is a0026.
- After Create, newest is chronological at the BOTTOM above New Container. Mid-list 375,720->375,360. Not 920->780. Not 1000->500. Always CLICK the NAME (x 160-300, y>1140: 50pt above) even if it already existed. Skipping a0017 skipped identifiers.

2c. Enable

- Check Enable PNG: OFF = inset white circle, ON = filled track knob far right. Skip if ON. Never toggle blind.

2d. Formulate

- This changes identifiers. Tiny nudge 375,820->375,780. long_tap Formulate 550ms at Formulate.x+180 (clamped 240-560). Never Generate & Apply. If Formulate missing and Hide is on screen: tap Spoofer, then Formulate. Do not skip Formulate.

2e. Advanced

- Tap Advanced. Then tap_ghost_knob x=626, y=title.center+38 for Hide, Pasteboard Prevent, Appium Prevent. Not Albums. Not (i). Each tap PNG 661_advanced vs 662/663/665 shot=True; identical bytes = missed, retune.

2f. Close / Batch

- Close after EACH container: Home, double-Home 280ms, interp_flick 375,780->375,60. Reopen Ghost for the next name. Never stay in Ghost across a batch. Never killall.
- CLI: .venv/Scripts/python.exe misc/ghost_live.py --from a0026 --to a0026. Wait for CLICK a0026 and GHOST_CONTAINERS=a0026. Do not recreate a0014-a0025.

3. Email — Hide My Email rN (locked smooth)

3a. Open

- Stack.open_url HME_SETTINGS_URL prefs:root=APPLE_ACCOUNT&path=ICLOUD_SERVICE/PRIVATE_EMAIL_MANAGE. Time 2.5s. If iCloud password sheet appears (with Ok/Cancel), type saved secrets.json icloud_password, tap OK. Never print password.
- Fallback if Create not found and iCloud main shows Manage Storage: scroll to find Hide My Email row, tap it, dump 03_hme_before_create_retry. If Create still not visible after entering Hide My Email list (BloFin/azAzar view), scroll to reveal Create at top: swipe 375,500->375,850 (reveal top) up to 6x, dump 03_retry_scroll_{n}.

3b. Create

- Dump-first: 03_hme_before_create JSON+PNG. Find + Create new address at 256,431 from dump. Tap it. Sleep 2.5s. Keep Apple's first @icloud.com. Never tap Use different address. iOS shows suggestion like 95-matter.prep@icloud.com / ambles-strider-9z@icloud.com.

3c. Label

- After Create, dumps 04_hme_after_create_{1..3} capture new @icloud.com, confirm via Next at 683,136 twice. Then 04_hme_before_label shows Label your address. Tap Label field at 209,877, type the Ghost name (a0014, not r14), sleep 0.6s. Then Next at 683,136.

3d. All Set

- All Set is a title — tap bottom Done at 375,1251 (or 333,1238). Dump 06_hme_after_label and 07_hme_after_done_{1,2} PNG. Writes logs/slots.json + logs/hidemyemail.json. Do not attach cockle.47tersest@icloud.com. Do not recreate r1-r13 or a0014-a0025 Ghost. If slot has email already and you deleted address, use replace_slot_email.py a00NN.
- CLI smooth: .venv/Scripts/python.exe misc/mint_slot_email.py rN → MINTED rN -> *@icloud.com. Verify logs/slots.json rN email set.

4. Create + Day 1 — Reddit (when you ask for Reddit, not Ghost/Email slice)

Only run when Ghost+Email slice is done and user says Create. Full micro path from docs/CREATE_DAY1_TUTORIAL.txt + LIVE_CREATE_PROMPT.txt section 16 — FATAL do not close Reddit on Verify.

4a. To Verify (no close)

- SpringBoard icon tap y-48: find Reddit icon dump 800_springboard, tap. Handle picker Select Container scroll slow 375,920->375,780 up to 8x to find rN (Crane containers r8+ off-screen as GHOST). Tap rN.
- Opened rN email=... log. Stay on Not now (241,804) -> Continue with phone number/Google/Apple screen -> tap Use email or username 375,920 -> Log in to Reddit -> tap Create a new account 376,1246 -> Hi new friend Enter your email -> tap Email pill 375,682 type slot email one key no paste -> Continue 375,839 -> Verify your email for heading-rebound-... . Stay on Verify: never Home/double-Home flick, never close_reddit.py, never Mail.app/killall/uiopen. OCR split heading- / rebound is OK — stay, do not treat as mismatch. r1-9 lock: single type then Continue (b_norm substring check).

4b. Code

- IMAP imap.mail.me.com:993 via hidemyemail logs, poll for 6-digit code (latest reddit apple mail). Enter via one key no paste fields, Continue. If Verify gone enter_code now ERRORs (do not loop).

4c. Username / Password / About / Interests

- username: keep first token under Username (e.g. Alive_Fly7585, FinancialSuccess8978), not inspiration list. Tap Continue. Dump 893_0 etc.
- password: one key no paste, save to logs, never print. Dump 902. Continue -> About you Woman (tap Woman, Continue). Interests: pick 4-5 chips (vozforums/League of Legends etc) Continue -> Building your home feed.

4d. Feed + Day 1

- Wait for home feed Popular near you. If Please turn on notifications sheet, tap OK at 512,803 not Not now. Day1 10-17min: day1.py flicks 375,700->375,400 etc, 170-283 scrolls, never Join, never vote/comment. Dump 931_day1_{n}.

4e. Close + Mark

- Only after day1: close_reddit.py Home double-Home 280ms flick 375,780->375,60 until card gone. But hardcoded guard in reddit_open.py:close_reddit() pre-dumps 939_preclose_check, refuses close if Verify/Username/Password/About/Interests/Building still on screen — will error REFUSE close ... Hardcoded guard: never close on Verify/Username.... Then mark_create_day1 rN writes slots.json reddit true day1 true + accounts.txt. Do not mark before day1.
- CLI smooth: reddit_to_verify.py rN -> reddit_enter_code.py --code=NNNNNN (or auto) -> reddit_username.py rN -> reddit_password.py rN -> reddit_about.py -> reddit_interests.py rN (or manual 5 picks) -> day1.py (1200s timeout) -> close_reddit.py -> mark_create_day1

5. Dump-first + PNG (trust PNG)

- Every miss / not on screen: dump live JSON always, PNG if shot=True (switches). Identical PNG bytes = tap missed. OFF knob = inset white circle, ON = filled track far right. See dumps/543_advanced.png vs 550_appium.png. Never reuse last run coordinates, never vision-guess.
- Common dumps: 621_home, 622_apps, 623_reddit, 624_containers_{i}, 625_name, 626_named, 627_list_{n}, 628_after_select, 650_before_formulate, 651_after_nudge, 652_after_formulate, 650_formulate_fallback_{rN}, 660_before_advanced, 661_advanced.png, 662/663/665, 690_home, 691_switcher, 692_after_flick, 693_springboard, 03_hme_before_create, 04_hme_after_create_*, 05_hme_label_typed, 06_hme_after_label, 07_hme_after_done_*, 800_springboard, 810_picker, 820_after_select, 873_* (welcome), 884_after_code, 893_0 username, 902 password, 931_day1, 940_home, 939_preclose_check.
- Keep phone awake unlocked, no passcode. One Lua at a time, recycle between scripts. Screen 750x1334. USB serial a4e58990ded23b45ecf69f32a8aeddf5e1b654d4.

6. Never

- Never Reddit signup / Create account on Ghost/Email slice. Never Sign in with Apple. Never Swipe Ghost Home (Reset/Erase). Never Generate & Apply. Never Use different address for HME. Never open Reddit signup during Ghost. Never close Reddit on Verify/Username/Password/About/Interests/Building — only after Day1 feed.
- Never Choicy. Never reverse Ghost.dylib / copy Ghost.deb. Never pirate Reddit IPA. Never SMS farms / Apple ID factory / captcha services.
- Never edit reddit-auto or reddit-auto-android. Never commit secrets.json/dumps/logs/accounts. Never paste LIVE_CREATE_PROMPT unless asking for Reddit Create. Never killall / Mail.app / uiopen on Verify.
- Never reuse old coordinates, never vision-guess, never Skip Enable if ON, never tap UUID row, never big swipe for Ghost list (use small 820->780).

7. After any .py edit

- python -m py_compile <file>. UTF-8. Verify via dumps. Keep .venv python.
